Slides adapted from David Keyes (@dgkeyes), inspired by Danielle Navarro (@djnavarro) and Paul Campbell (@paulcampbell91)

Art by @allison_horst

What is RMarkdown?

What is RMarkdown?

Authoring framework for data science.

What is RMarkdown?

Authoring framework for data science.

You can:

1. Write, save, and run code
2. Generate high-quality reports that can be shared with an audience

RMarkdown Interface

What can I use RMarkdown for?

What can I use RMarkdown for?

- Share your analyses and results with your lab in a variety of formats (e.g., PDF, HTML, Word)
- Build interactive applications (e.g., Shiny)
- Write journal articles
- Make slides for presentations (like this one!)
- Create websites or blogs
- and more!

Why use RMarkdown?

Why use RMarkdown?

- RMarkdown was designed for easier **reproducibility**.

Why use RMarkdown?

- RMarkdown was designed for easier **reproducibility**.
- Your code and narrative are in the same place, so collaborators can see what you did, why you did it, and how you obtained your results.

Why use RMarkdown?

- RMarkdown was designed for easier **reproducibility**.
- Your code and narrative are in the same place, so collaborators can see what you did, why you did it, and how you obtained your results.
- RMarkdown is flexible and can support several languages (e.g., Python, C++, Java, etc.) and several output types, which makes collaboration easy.

Why use RMarkdown?

- RMarkdown is flexible and can support several languages (e.g., Python, C++, Java, etc.) and several output types, which makes collaboration easy.

You can alternate between text and code within the same document

```
#you don't need to use hashmarks for text (outside of a chunk)
```

You can also visualize what your code will look like once it's knitted!

RMarkdown Overview

RMarkdown Overview

Every RMarkdown document has the following:

The diagram illustrates the structure of an RMarkdown document, showing five distinct sections:

- YAML** (Blue background):

```
---
title: "My Super Fancy Report"
author: "David Keyes"
output: html_document
---
```
- Code Chunk** (Red background):

```
```{r setup, include=FALSE}
knitr::opts_chunk$set(echo = TRUE)
```
```
- Text** (Orange background):

```
## R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.

When you click the Knit button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:
```
- Code Chunk** (Red background):

```
```{r cars}
summary(cars)
```
```
- Text** (Orange background):

```
## Including Plots

You can also embed plots, for example:
```
- Code Chunk** (Red background):

```
```{r pressure, echo=FALSE}
plot(pressure)
```
```

YAML

```
1 ---  
2 title: "This workshop is awesome"  
3 author: "Joscelin Rocha Hidalgo"  
4 date: "07/18/2020"  
5 output: word_document  
6 ---  
7
```

YAML

```
1 ---  
2 title: "This workshop is awesome"  
3 author: "Joscelin Rocha Hidalgo"  
4 date: "07/18/2020"  
5 output: word_document  
6 ---  
7
```

Stands for "YAML Ain't Markup Language"

YAML

```
1 ---  
2 title: "This workshop is awesome"  
3 author: "Joscelin Rocha Hidalgo"  
4 date: "07/18/2020"  
5 output: word_document  
6 ---  
7
```

Stands for "YAML Ain't Markup Language"

The very top of your RMarkdown

YAML

```
1 ---  
2 title: "This workshop is awesome"  
3 author: "Joscelin Rocha Hidalgo"  
4 date: "07/18/2020"  
5 output: word_document  
6 ---  
7
```

Stands for "YAML Ain't Markup Language"

The very top of your RMarkdown

Where you add title, author, date, output options, etc.

YAML

```

becomes

Inline Code

Surround code with back ticks and r. R replaces inline code with its results.

```
#Two plus two equals `r 2 + 2`
```

becomes

Two plus two equals 4.

Inline Code

Surround code with back ticks and `r`. R replaces inline code with its results.

```
#Two plus two equals `r 2 + 2`
```

becomes

Two plus two equals 4.

- This is great for writing papers!

Code Chunk

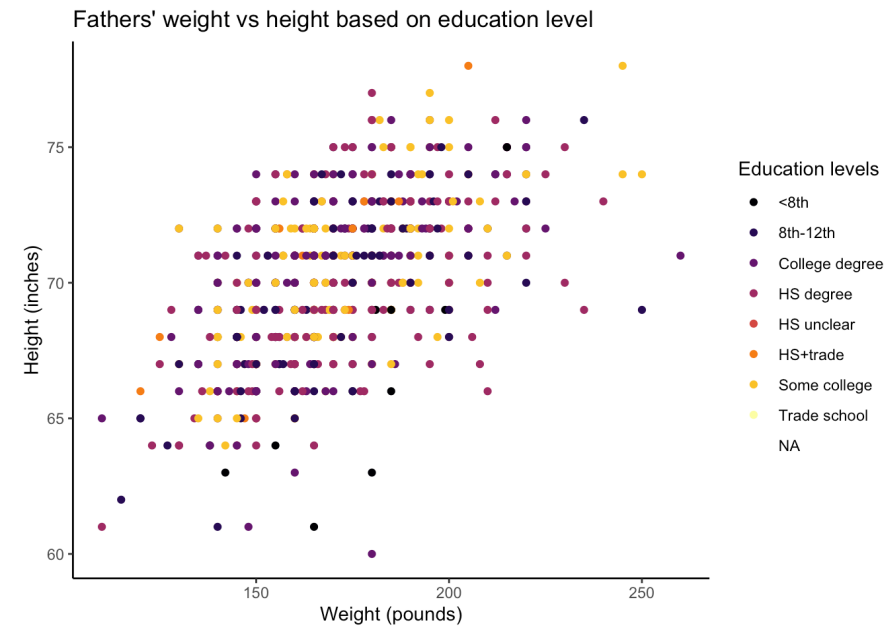

They start with three backticks and {r} and end with three backticks.

```
154 - ```{r}
155   ggplot(data,aes(dwt,dht, color = ded_lbls)) +
156     geom_point() + scale_color_viridis_d(option = "inferno") +
157     labs(title = "Fathers' weight vs height based on education level",
158          x = "Weight (pounds)",
159          y = "Height (inches)",
160          color = "Education levels") +
161     theme_classic()
162
163   ```
164
```

Code Chunk

They start with three backticks and {r} and end with three backticks.

```
154 ```{r}
155 ggplot(data,aes(dwt,dht, color = ded_lbls)) +

164
```

Insert a Code Chunk: Button

Insert a Code Chunk: Keyboard Shortcut

Windows

control+alt+i

Insert a Code Chunk: Keyboard Shortcut

Windows

control+alt+i

Mac

command+option+i

Chunk Options

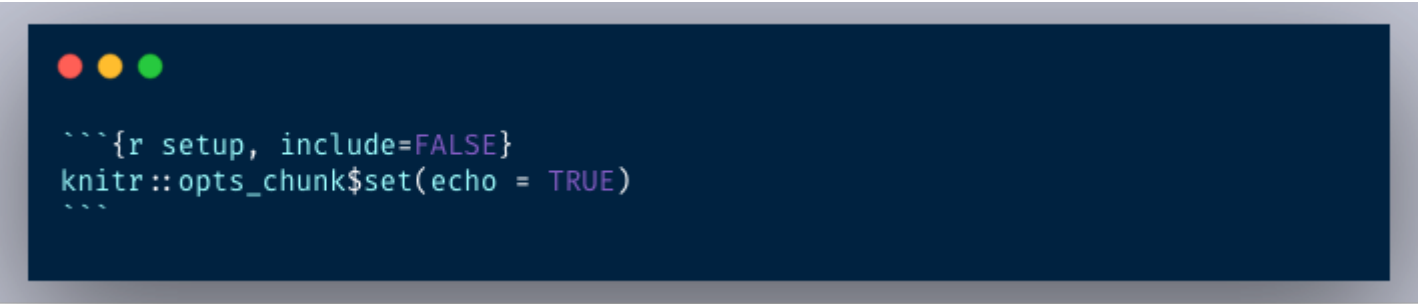

Other options that we won't discuss today:

- **warning** (show any warnings that R throws)
- **message** (show any messages that R sends)
- **fig.width** (default figure width)
- **fig.height** (default figure height)
- **echo** (show the R code in the knitted report)
- and many more ...

Setup Code Chunk

Setup Code Chunk

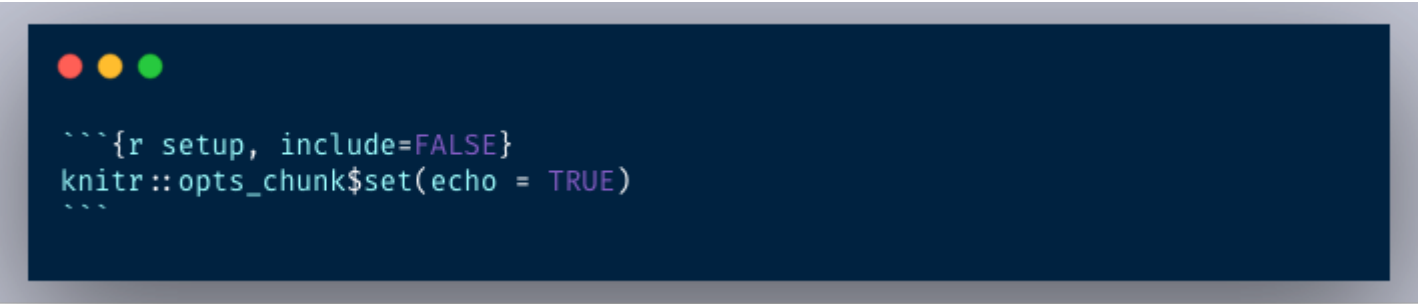

A special code chunk with the text `setup` right after the `r`.

```
```${r} setup, include=FALSE}  
knitr::opts_chunk$set(echo = TRUE)
```
```

Setup Code Chunk

A special code chunk with the text `setup` right after the `r`.

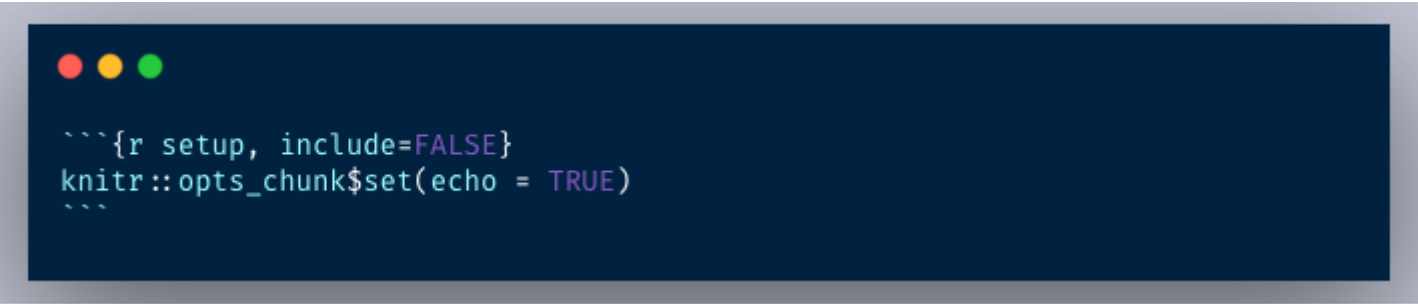

```
```{r setup, include=FALSE}
knitr::opts_chunk$set(echo = TRUE)
```
```

All chunk options can be set at the **global level** (in the setup code chunk) or at the **chunk level** (for individual chunks).

Setup Code Chunk

A special code chunk with the text `setup` right after the `r`.

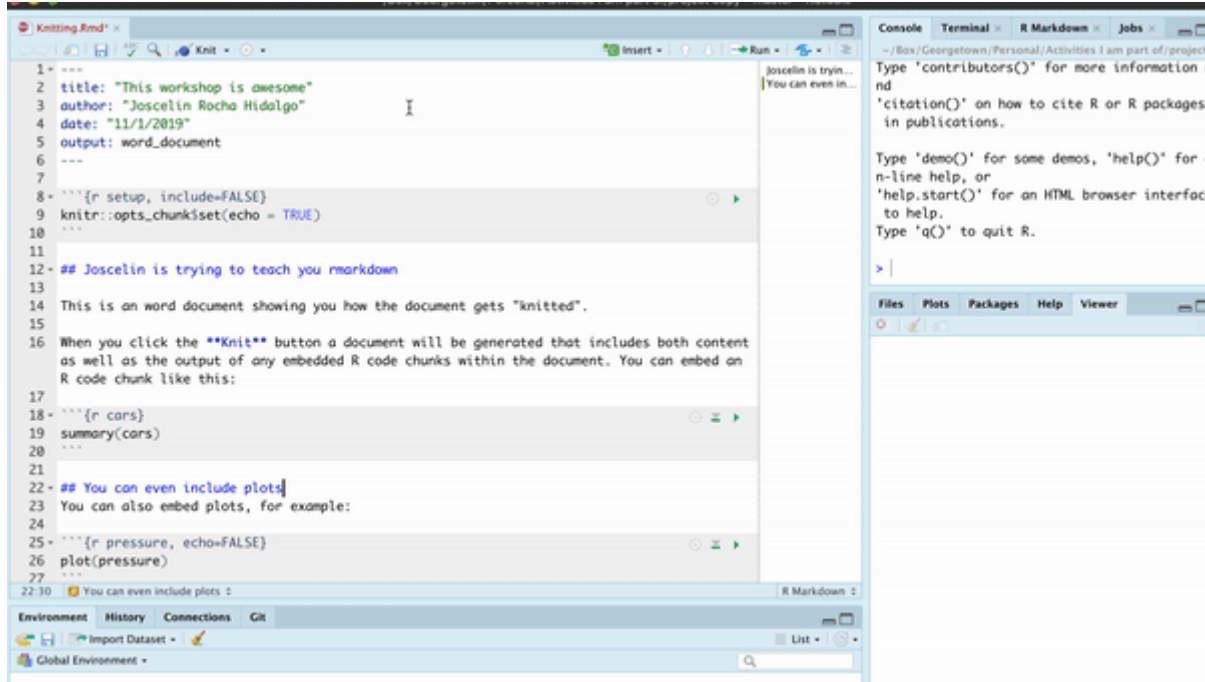

```
```{r setup, include=FALSE}
knitr::opts_chunk$set(echo = TRUE)
```
```

All chunk options can be set at the **global level** (in the setup code chunk) or at the **chunk level** (for individual chunks).

Options at the individual chunk level **override** global chunk options.

Knitting (aka Export)

```
1 ---
2 title: "This workshop is awesome"
3 author: "Joscelin Rocha Hidalgo"
4 date: "11/1/2019"
5 output: word_document
6 ---
7
8 ```{r setup, include=FALSE}
9 knitr::opts_chunkset(echo = TRUE)
10 ```
11
12 ## Joscelin is trying to teach you markdown
13
14 This is an word document showing you how the document gets "knitted".
15
16 When you click the Knit button a document will be generated that includes both content
17 as well as the output of any embedded R code chunks within the document. You can embed an
18 R code chunk like this:
19
20 ```{r cars}
21 summary(cars)
22 ```
23
24 ## You can even include plots
25 You can also embed plots, for example:
26
27 ```{r pressure, echo=FALSE}
28 plot(pressure)
29 ```
30
31 You can even include plots :
```

Your RMarkdown won't knit if you have errors in your code. Knit early and often to identify errors!

Writing Reproducible Code

(adapted from Harvard WiP Crash Course in R by Kirsten Morehouse)

Writing Reproducible Code

(adapted from Harvard WiP Crash Course in R by Kirsten Morehouse)

Reproducible = When you send someone your code and data, they can 100% reproduce your results, without getting errors (or divergent results)

- Make sure you are using the **most recent version of R** (sometimes packages are or aren't compatible with different versions of R)

- Make sure you are using the **most recent version of R** (sometimes packages are or aren't compatible with different versions of R)
- Update your packages: `update.packages()`

- Make sure you are using the **most recent version of R** (sometimes packages are or aren't compatible with different versions of R)
- Update your packages: `update.packages()`
- Load AND install packages:
 - `if (!require("packagename"))
 {install.packages("packagename"); require("packagename") }`

- Make sure you are using the **most recent version of R** (sometimes packages are or aren't compatible with different versions of R)
- Update your packages: `update.packages()`
- Load AND install packages:
 - ```
if (!require("packagename"))
 {install.packages("packagename"); require("packagename")}
```
- DON'T include paths when you load data. Your path won't work for other people. Specify working directories instead.

- Make sure you are using the **most recent version of R** (sometimes packages are or aren't compatible with different versions of R)
- Update your packages: `update.packages()`
- Load AND install packages:
  - ```
if (!require("packagename"))  
  {install.packages("packagename"); require("packagename") }
```
- DON'T include paths when you load data. Your path won't work for other people. Specify working directories instead.
- Save any models you've run.

- Make sure you are using the **most recent version of R** (sometimes packages are or aren't compatible with different versions of R)
- Update your packages: `update.packages()`
- Load AND install packages:
 - ```
if (!require("packagename"))
 {install.packages("packagename"); require("packagename") }
```
- DON'T include paths when you load data. Your path won't work for other people. Specify working directories instead.
- Save any models you've run.
- Clear your environment and try running everything again. Bonus if you run your code on a new machine.

# Share your code

## Info to include:

- README file
  - What should users expect to see in your repo?
- Instructions for reproducing your results (make sure to include the R script and data names, as well as the order in which the scripts should be run)
- Data + Codebook
- Analysis script (bonus points for data cleaning script, too!)
- Saved models

# Your Turn

1. Create a new RMarkdown file, setting the default output format as Word.
  - File > New File > R Markdown...
2. Save your RMarkdown file as report.Rmd.
3. Go into the YAML and change the title to “My 2022 Report.”
4. Change the output format to HTML by changing `output: word_document` to `output: html_document`.
5. Add the following first-level header: "Introduction"

03:00

# Your Turn

6. Add this text (note the bold and italics) below the introduction header: "My name is (write your name here). I am the most **amazing** human being. You've *never* met someone like me. Please hire me!"
7. Add the following second-level header: "Reasons Why I am the Best"
8. Add the following list of reasons:
  - Because I say so
  - Because it is true
  - Why would I lie?
9. Create a chunk using a shortcut
10. Calculate  $2 + 2$  and save the result as a variable called "my\_var"
11. Print "my\_var" using print()
12. Knit and reopen the report.html file

05:00
